

Dashboard

Drivers

Customers

All Vehicles

Settings

Your Assignment is what you are looking at above!

You make a navigation bar using what you have learned till now - Vanilla Javascript, HTML and CSS.

The basic layout is given above but as usual, we encourage you to explore!

Mandatory parts of the Navigation Bar to be incorporated are as below:

- It should have a logo at the top
- It should necessarily have the mentioned 5 tabs: Dashboard, Drivers, Customers, All Vehicles and Settings
- It should be a toggle Navigation Bar, it should hide when you click on the close button.
- For Now, Content Areas should have your selfies so that we know whose assignment is it!

Areas to Explore:

- Design: It could be a left/right Bar based on your preferences.
- Feel Free to use any colour palette.
- You can also add functionalities if you feel, like what happens on clicking on the tab/s.

As this is an evaluation task, it does matter if your assignment stands out. This will be a continued project and we will keep adding stuff as we move forward with our learning!
